

HHD Inventory Manager

User Manual - Version 1.1.1

HHD Inventory Manager tracks home hemodialysis supplies, treatments, received inventory, alerts, calendar records, and inventory history.

Inventory Quantities

Inventory totals are displayed only as whole units or half units. Values such as 4.4 or 4.8 are normalized so they do not appear in the inventory tables.

- Valid examples: 4, 4.5, 5, and 5.5.
- Baseline counts, received quantities, and per-session or weekly usage entries must use whole or half units.
- Calculated totals are normalized to the nearest half unit.

Remove Half-Used Item

Each inventory item has an optional setting named Enable 'Remove Half-Used Item (.5)' action. This option is disabled by default.

- Open the inventory group and select the item.
- Click Edit / Rename Selected and enable the half-used item option.
- After saving, select the item and click Remove Half-Used Item (.5).
- The program subtracts exactly 0.5 unit and records a dated inventory correction.

Treatments and Calendar Notes

Treatment notes entered on the Treatments page are saved with the treatment record. The Treatment Calendar displays the treatment result and its notes inside the corresponding day.

Calendar Color	Meaning
Green	Treatment performed
Yellow	Incomplete treatment
Red	Missed treatment
Normal theme color	No treatment record

Existing Features

- Medical Blue, Beige, and Dark themes.
- Responsive inventory and history tables.
- Month and Week treatment calendar views.
- Database import and export.
- Inventory History with selectable periods.
- SAK attempted-treatment accounting.
